Let this rod be turned by an angle j about an axis at right angles to AXA2. In the new position the forces F_v F_2 , instead of being in equilibrium, form a couple whose moment is $FX AXA2 \sin f$. If in the original position of the rod the forces tend to increase the distance AXA (Fig. 42), the couple in the new position will 2. STABILITY. tend to bring the rod back to its position of equilibrium. In this case the original position of the rod is said to be a position of stable equilibrium. The effect of the earth's magnetism on the needle of a compass offers a familiar example. If, however, in the original position the forces tend to diminish the distance AXA2 (Fig. 43), the couple arising after displacement tends to increase the displacement and thus to remove the rod...
