Factorial Design: A Comparative Study With And Without Use of Software

By Palekar - Shanbhag, Pradnya / Parikh, Priyank

Book Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | A Comparative Factorial Design Approach In Pharmaceutical Formulations | Factorial design as optimization technique was applied in formulation development and processing conditions of Diclofenac sodium granules. The present study involves design and evaluation of non-effervescent granules of Diclofenac sodium with excellent flow properties. In the formulation of non-effervescent granules of Diclofenac sodium, angle of repose was the dependent variable (with excellent flow) and the concentrations of binder (Povidone K-30) and lubricant (Magnesium stearate) were the two independent variables chosen at two different levels. With the help of factorial approach, a polynomial equation $Y = B_0 + B_1X_1 + B_2X_2 + B_{12}X_1X_2$ was formed. Using the polynomial equation three new formulations were selected and performed to evaluate the correlation between experimental and predicted responses. A good correlation was obtained between the experimental and the predicted values. Also the work was oriented to have a comparative study of application of factorial design with and without use of software and come up with any pros and cons of these respective ways. | Format: Paperback | Language/Sprache: english | 76 pp.

Reviews

Certainly, this is the greatest work by any author. It can be written in easy words and phrases rather than confusing. I am just happy to let you know that this is actually the greatest ebook we have studied inside my individual daily life and may be the greatest ebook for at any time.

-- **Trent Monahan**

This book is so gripping and fascinating. Of course, it is actually performed, still an interesting and amazing literature. You will not feel monotony at anytime of your respective time (that's what catalogs are for about in the event you request me).
