Excerpt: . . . 14 2 131 The effect of reducing the longitudinal modulus of the material from GN m mass to GN m2 increases the panel about when compared to aluminum wing 111 7 panels throughout the entire load range. heavily-loaded panels, this has For the same effect reducing the allowable average panel strain for the higher as 0. 0014. modulus material by However, for lightly-loaded panels, the reduction in allowable strain does not increase panel mass because these panels are stif-ness-critical and do not reach the limits of material strength. Tradeoffs such as this should be considered during any design evaluation. The effect of discrete-stiffness design on structural efficiency was also evaluated and the results for blade-stiffened panels are shown figure 20. in A The Material properties were used to generate these curves and the one repre-0 senting designs with plies in the skin is the same as the curve shown in figure 19. The curve labeled Fscrete stiffness has the...
